

Library function in module *drops*: [notify\(\)](#)

Arguments: *tskey*, *from_time*, *to_time* (*tskey* = *stationid*, *paramid*, *typeid*, *level*, *sensor*)

Return value: None (except for errors).

Called internally by [LARD Ingestor](#) for notifying about new, (quality) updated, or deleted observations that may affect a product.

The observations in question are in the range [*from_time*, *to_time*] of the time series identified by *tskey*.

Endpoint in [LARD API](#) service: [/product/availability](#)

Query parameters:

- product type (optional - default = all product types)

Response:

- JSON that contains the following for the specified product type(s):
 - * input schema
 - * output schema
 - * available input schema instances w/ ranges (lowest *from_time*, highest *to_time* etc.)

Called by [LARD API](#) clients (like Frost or custom tools).

Endpoint in [LARD API](#) service: [/product](#)

Query parameters:

- product type
- valid instance of input schema for this product type

Response:

- JSON that depends on the product type

Called by [LARD API](#) clients (like Frost or custom tools).
